

### Introduction

Beck Optronics Solutions offers a range of high-performance ruggedised zoom lenses based on a common chassis and sharing the same control electronics. Applications include, but are not limited to, long range surveillance, border security and remote weapon stations.

These lenses are designed to operate over the 700-1700 nm SWIR waveband of the latest InGaAs detectors, using aspheric lens design and special materials optimised for this spectrum. The systems are fully automated for remote control, are built to full Mil-SPEC and can be customised to meet specific requirements.
